
Mathews Heli M Camo Description

The HeliM (pronounced Helium or Heli m) packs two decades worth of single-cam advancements to deliver the quietest, easiest to shoot, ultra-rigid lightweight, smoothest drawing, most technologically advanced hunting bow ever offered by Mathews.

The Heli M produces speeds up to 332 feet per second with a generous 7" brace height and stable at full draw to achieve tight arrow groups.

Advanced unique geometric pattern Geogrid riser, maintains structural integrity and delivers a surprisingly super smooth draw, Harmonic Stabiliser Lite and a lightweight Reverse Assist Roller Guard all feature on the HeliM.

The HeliM super-light, rigid riser design, with an incredibly thin profile to make it virtually invisible in the field, making the HeliM one of the industry's lightest hunting bows.

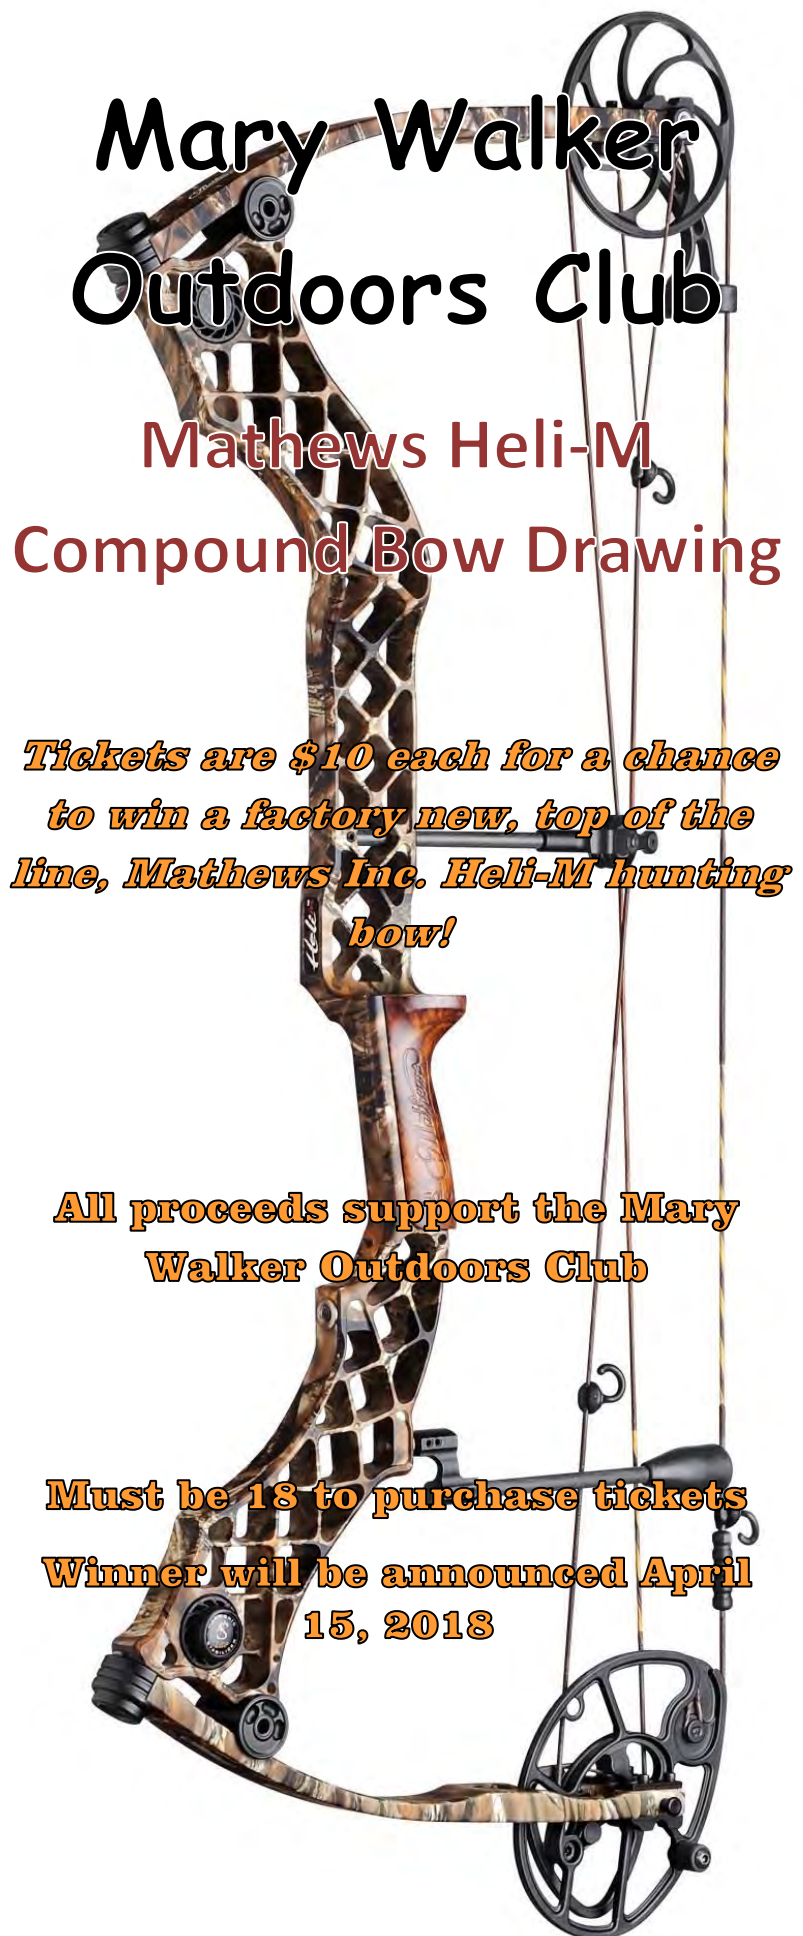

Mathews Solocam revolutionized the market over 20 years ago and changed archery forever by making timing and synchronization issues history and resulted in the HeliM came with improved accuracy and recoil and noise nearly vanishing.

Specs at a glance

- IBO Speed up to 332fps
 - Weight ranges 40-50lbs, 50-60lbs, 55-65lbs, 60-70lbs. Please specify weight required. All bows are adjustable 10lbs down from the peak draw weight.
 - Draw length range 26"-30" & Half Sizes 26.5"-29.5"
